

# Towards Building More Intelligent Conversational Systems

Dr. Minlie Huang (黄民烈)

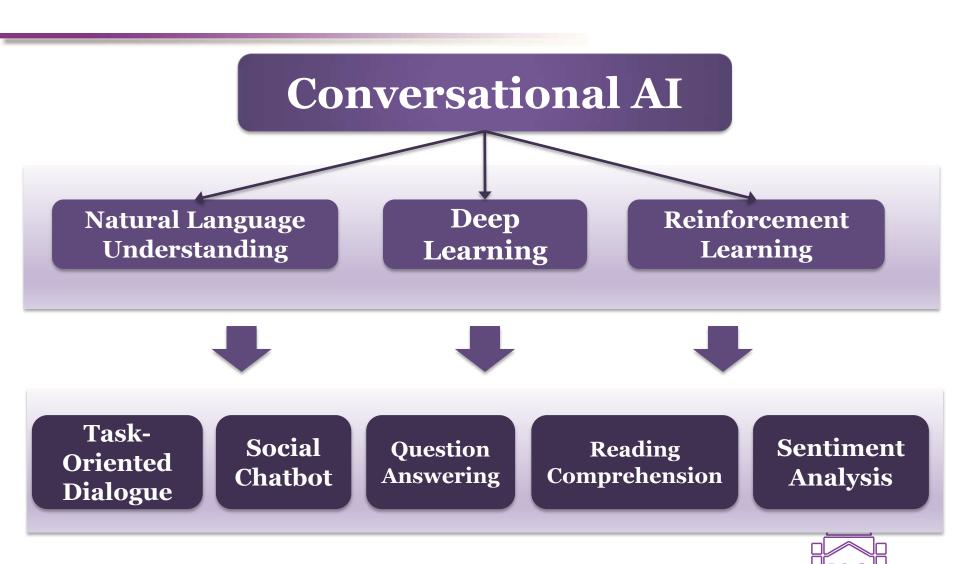

**Associate Professor** 

**CS** Department, Tsinghua University

aihuang@tsinghua.edu.cn

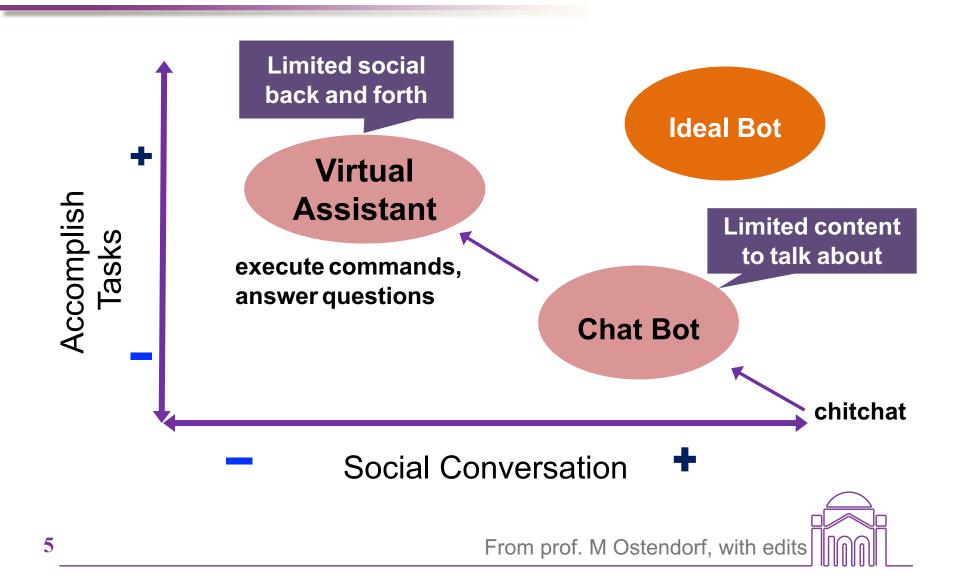

http://coai.cs.tsinghua.edu.cn/hml

### Research Picture of the CoAI Group

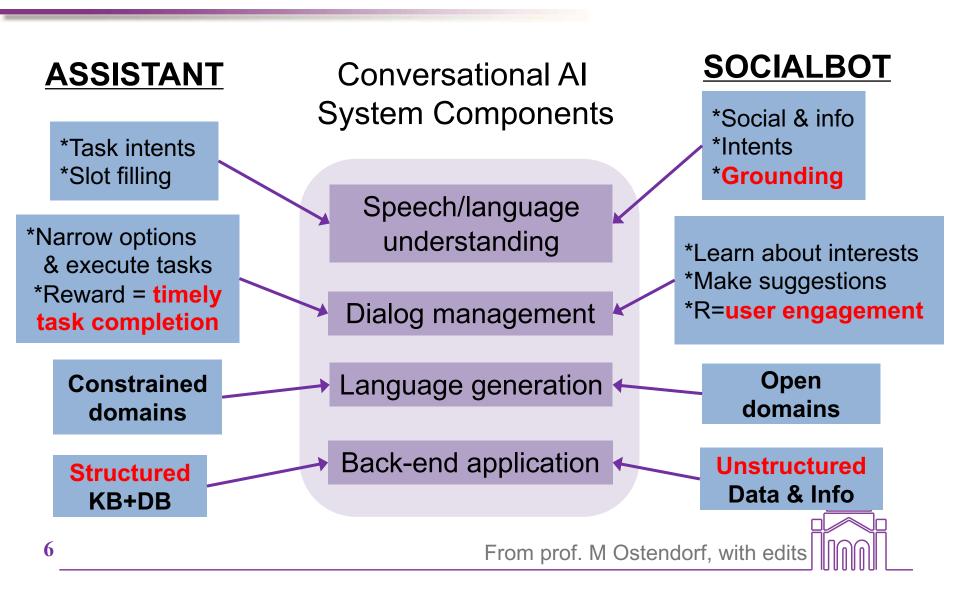

# Types of Conversational AI Systems

### **Issues Vary for Different Paradigms**

# **Good Examples from DL Models**

User: 最幸福的人不是拿到了最好的东西, 而是学会去珍惜手上已经拥有的人。

The happiest person is not the one who gets the best thing, instead who cherishes what she/he already has.

Machine: 是的,所以我也要珍惜自己的幸福

Agree, I will cherish my happiness too.

User: 时间啊,你这把杀猪刀。。。

Time is a killer...

Machine: 我是被杀的

I am the one who was killed.

User: 怕孤獨,又捨不下自己的小自由。

Afraid to be lonely, but wont' give up my little freedom.

Machine: 我想去流浪,但没有人陪我去。

I want to wander, but no one accompany me.

### **Bad Examples are More!**

User: 其实,他没有那么爱你。

Ohh, he does not love you that much.

Machine: 幸福的一天开始了。

A happy day starts.

User: 回北京了! 很冷很高兴!

Back to Beijing now. So cold so happy!

Machine: 什么时候来北京啊?

When will you come to Beijing?

User: 我来自上海。

I come from Shanghai.

Machine: 真巧,我来自海南,<u>老乡啊</u>

So cool, I am from Hainan, the same province!

### **Controllability of Language Generation**

- Three fundamental problems in current neural language generation models
  - Semantics
  - **♦ Consistency** (long text generation)
  - ◆ **Logic** (reasonable and making sense)

### **Bad Examples are More!**

### **Xiaoice by MSRA**

### 语义理解的问题 Semantic understanding

**User**: 你家多大? How large is your house?

小冰:这么快就要爆年龄了?

So soon to reveal my age?

User: 你是素食主义者还是吃肉啊?

Are you vegan or meatatarian?

小冰:怎么减肥

How can I lose weight?

### 上下文理解的问题 Context issue

User: 早饭不好吃

小冰: 那明早一起吃

User: 行,你推荐的应该不错

小冰: 是吗?

User: 哈哈,我相信你

小冰: 呃呃

### 个性身份一致性问题 Inconsistency in personality

User: 你几岁了?

小冰: 我啊。。。反正是九零后!

User: 那你是几几年出生的? 小冰: 错,75年阳历一月出生。

User: 你是九零后,怎么会75年出生?

小冰: 生在九零后, 在深圳只能被当做八

零后了。

# AI Ethics, a More Serious Issue

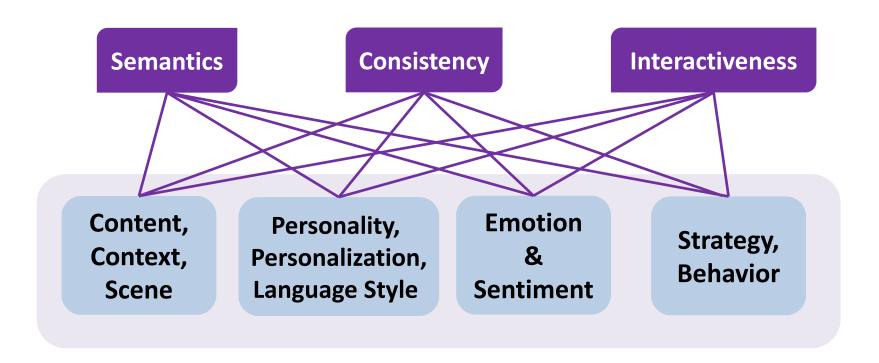

### **Challenges in Conversational Systems**

- One-to-many: one input, many many possible responses
- Knowledge & Reasoning: real understanding requires various knowledge, world facts, commonsense, etc.
- Situational Context
  - Who are you talking with?
    - Stranger, or friend?
  - His mood and emotion?
  - Shared backgrounds that are only accessible by two acquaintances

### Challenges in Conversational Systems

### **Open-domain + Open-topic**

### **Open-domain Conversational Systems**

- Behaving more interactively:
  - Perceiving and Expressing Emotions (AAAI 2018)
  - Proactive Behavior by Asking Good Questions (ACL 2018)
  - Controlling Sentence Function (ACL 2018)
  - Topic Change (SIGIR 2018)
- Behaving more consistently:
  - ◆ Explicit Personality Assignment (IJCAI-ECAI 2018)
- Behaving more intelligently with semantics:
  - Better Understanding and Generation Using Commonsense Knowledge (IJCAI-ECAI 2018 distinguished paper)
  - ◆ Discourse parsing in multi-party dialogues (AAAI 2019)

### **Open-domain Conversational Systems**

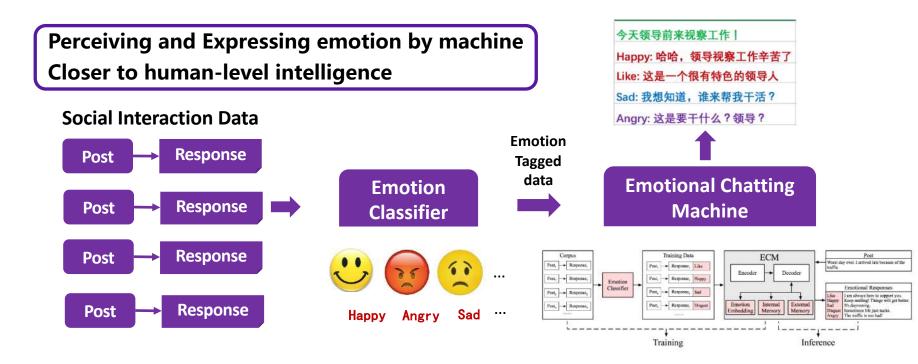

- Behaving more <u>interactively</u>:
  - Perceiving and Expressing Emotions (AAAI 2018)
  - Proactive Behavior by Asking Good Questions (ACL 2018)
  - Controlling Sentence Function (ACL 2018)
  - Topic Change (SIGIR 2018)
- Behaving more consistently:
  - ◆ Explicit Personality Assignment (IJCAI-ECAI 2018)
- 1 Emotional Chatting Machine: Emotional Conversation Generation with Internal and External Memory. **AAAI 2018**.
- 2 Assigning personality/identity to a chatting machine for coherent conversation generation. **IJCAI-ECAI 2018**.
- (3) Commonsense Knowledge Aware Conversation Generation with Graph Attention. **IJCAI-ECAI 2018**.
- 4 Learning to Ask Questions in Open-domain Conversational Systems with Typed Decoders. **ACL 2018**.
- (5) Generating Informative Responses with Controlled Sentence Function. **ACL 2018**.
- 6 Chat more: deepening and widening the chatting topic via a deep model. SIGIR 2018.
- 7 A Deep Sequential Model for Discourse Parsing on Multi-Party Dialogues. **AAAI 2019**.

# **Interactiveness: Emotion Perception and Expression**

Our work was reported by MIT Technology Review, the Guardian, Cankao News, Xinhua News Agency etc.

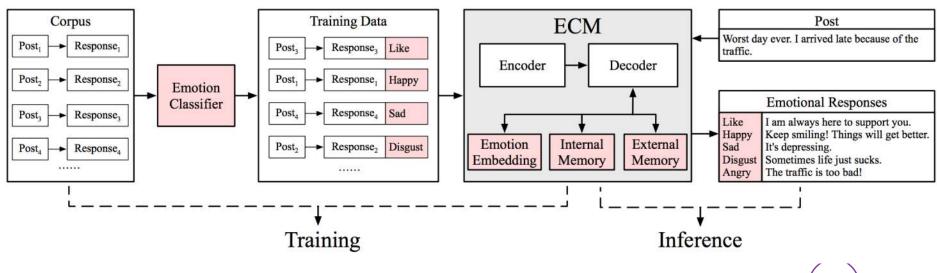

Prof Björn Schuller: "an important step" towards personal assistants that could read the emotional undercurrent of a conversation and respond with something akin to empathy.

•Hao Zhou, Minlie Huang, Xiaoyan Zhu, Bing Liu. Emotional Chatting Machine: Emotional Conversation Generation with Internal and External Memory. **AAAI 2018.** 

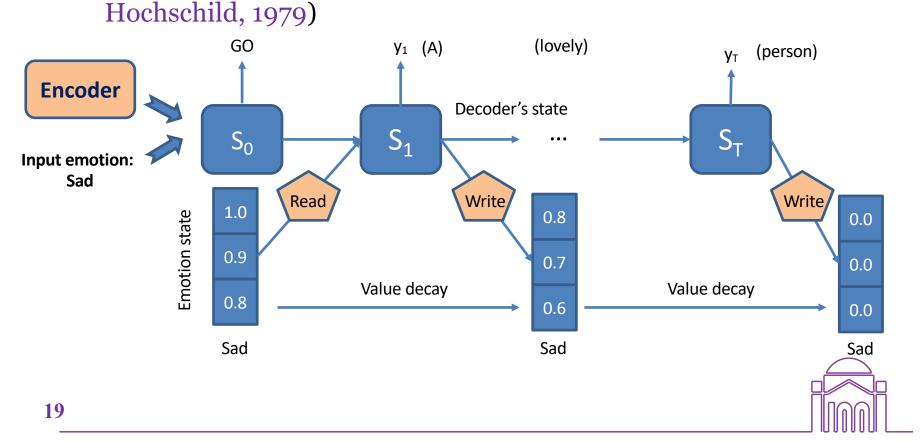

- Emotion category embedding: High level abstraction of emotions
- Emotion internal state: Capturing the change of emotion state during decoding
- **Emotion external memory**: Treating emotion/generic words differentially

 Internal emotion memory: "emotional responses are relatively short lived and involve changes" (Gross, 1998;

 Internal emotion memory: "emotional responses are relatively short lived and involve changes" (Gross, 1998; Hochschild, 1979)

• Internal emotion memory: "emotional responses are relatively short lived and involve changes" (Gross, 1998;

$$g_t^r = \operatorname{sigmoid}(\mathbf{W}_{\mathbf{g}}^{\mathbf{r}}[e(y_{t-1}); s_{t-1}; c_t]),$$
  
 $g_t^w = \operatorname{sigmoid}(\mathbf{W}_{\mathbf{g}}^{\mathbf{w}} s_t).$ 

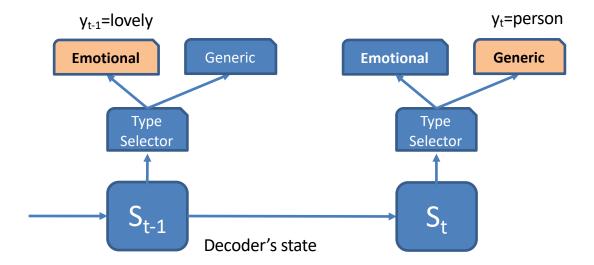

$$egin{array}{lcl} oldsymbol{M}_{r,t}^I &=& oldsymbol{g}_t^r \otimes oldsymbol{M}_{e,t}^I, \ oldsymbol{M}_{e,t+1}^I &=& oldsymbol{g}_t^w \otimes oldsymbol{M}_{e,t}^I, \end{array}$$

$$s_t = \text{GRU}(s_{t-1}, [c_t; e(y_{t-1}); M_{r,t}^I]).$$

External emotion memory: generic words
 (person) and emotion words (lovely)

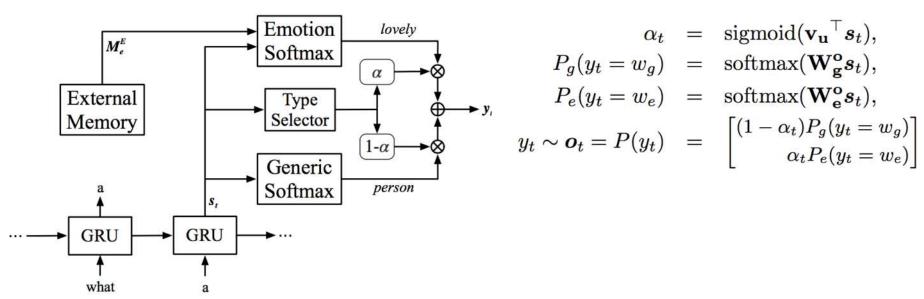

• External emotion memory: generic words

(person) and emotion words (lovely)

- Emotion Classification Dataset: the Emotion Classification
   Dataset of NLPCC 2013&2014
  - ◆ 23,105 sentences collected from Weibo
- The STC dataset: a conversation dataset from (Shang et al., 2015)
  - ◆ 219,905 posts and 4,308,211 responses
  - Each post has about 20 responses

### Automatic Evaluation

Method	Perplexity	Accuracy
Seq2Seq	68.0	0.179
Emb	62.5	0.724
ECM	65.9	0.773
w/o Emb	66.1	0.753
w/o IMem	66.7	0.749
w/o EMem	61.8	0.731

Table 4: Objective evaluation with perplexity and accuracy.

Method (%)	2-1	1-1	0-1	2-0	1-0	0-0
Seq2Seq	9.0	5.1	1.1	37.6	28.0	19.2
Emb	22.8	9.3	4.3	27.1	19.1	17.4
ECM	27.2	10.8	4.4	24.2	15.5	17.9

Score distribution

Table 5: The percentage of responses with the score of *Content-Emotion*. F content score is 2 and emotion score

Pref. (%)	Seq2Seq	Emb	ECM
Seq2Seq	: <del>-</del> :	38.8	38.6
Emb	60.2	-	43.1
ECM	61.4	56.9	-

### **Preference test**

Table 7: Pairwise preference of the three systems.

Method	Ove	erall	Li	ke	S	ad	Dis	gust	An	gry	На	рру
Method	Cont.	Emot.										
Seq2Seq	1.255	0.152	1.308	0.337	1.270	0.077	1.285	0.038	1.223	0.052	1.223	0.257
Emb	1.256	0.363	1.348	0.663	1.337	0.228	1.272	0.157	1.035	0.162	1.418	0.607
ECM	1.299	0.424	1.460	0.697	1.352	0.313	1.233	0.193	0.98	0.217	1.428	0.700

Table 6: Manual evaluation of the generated responses in terms of *Content* (Cont.) and *Emotion* (Emot.).

Post	Model		Response(Original)	Response(Translated)
	Seq2Seq		承诺,就是一个骗子说给一个傻子听的。	A promise is what a cheater says to a fool.
承诺,就是一个骗子说给		Like	承诺是一个专一的傻子	Promise is a single-minded fool
一个傻子听的。		Нарру	我就是一个 <mark>开心</mark> 的傻子	I'm just a happy fool
A promise is what a cheater says to a fool.	ECM	Sad	我就是一个 <mark>悲伤</mark> 的傻子	I am a sad fool
		Disgust	一个骗子说给一个傻子听	A cheater says to a fool
		Angry	不管你信不信,反正我信了!	Whatever you believe or not, I trust in it!
	Seq2Seq		知道真相的我眼泪掉下来。	After knowing the truth, I burst into tears.
	ECM	Like	太可爱了,太可爱了!	Too lovely, it's too lovely.
知道真相的我眼泪笑下来 Knowing the truth, I laughed		Нарру	笑得我眼泪都出来了。	I can't help laugh myself to tears.
myself to tears		Sad	知道真相的我 <mark>眼泪</mark> 掉下来。	After knowing the truth, I burst into tears.
		Disgust	这是真的还是假的?	Is this true?
		Angry	什么意思?没看懂。	What do you mean? I don't understand.

•Hao Zhou, Minlie Huang, Xiaoyan Zhu, Bing Liu. Emotional Chatting Machine: Emotional Conversation Generation with Internal and External Memory. **AAAI 2018.** 

### **More Examples**

情绪 emotion	Post:早上的天气不错啊! 哈哈哈	哈哈哈
Other	今天是个好天气。	
喜欢 Like	今天的天气不错啊!	
悲伤 Sad	天气好,心情不好。	
厌恶 Disgust	这是哪里啊? 求解释	
愤怒 Angry	怎么了?什么情况?	
快乐 Happy	今天的天气真好啊!	

情绪 emotion	Post:为了解决抄作业的不好习惯, 高数老师这回要出绝招了!
Other	这老师是要逆天吗?
喜欢 Like	这老师太有才了!
悲伤 Sad	这样的老师伤不起啊
厌恶 Disgust	这老师也太狠了点吧
愤怒 Angry	这老师是要逆天啊!
快乐 Happy	哈哈,这老师太有才了

情绪	Post:送一个这样的蛋糕,	给你美丽的闺蜜
emotion	吧!	
Other	这是蛋糕蛋糕吗?	
喜欢 Like	好漂亮的蛋糕啊!	
悲伤 Sad	为什么我觉得很恶心	
厌恶 Disgust	这样的蛋糕你忍心吗?	
愤怒 Angry	有没有想开网店的?	
快乐 Happy	哈哈,好可爱的蛋糕!	

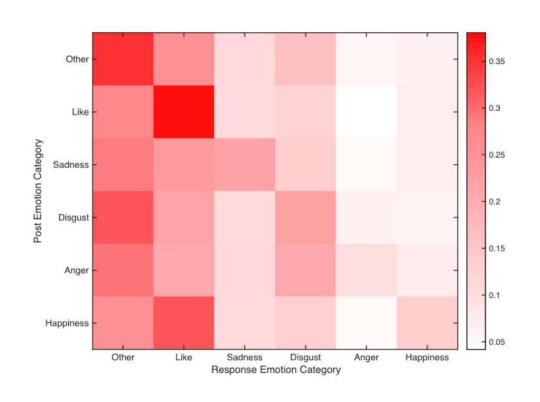

情绪	post:承诺,就是一个骗子说给一个傻子听
emotion	的。
Other	承诺就是一个承诺
喜欢 Like	承诺是一个专一的傻子
悲伤 Sad	我就是一个悲伤的傻子
厌恶 Disgust	一个骗子说给一个傻子听
愤怒 Angry	不管你信不信,反正我信了!
快乐 Happy	我就是一个开心的傻子

•Hao Zhou, Minlie Huang, Xiaoyan Zhu, Bing Liu. Emotional Chatting Machine: Emotional Conversation Generation with Internal and External Memory. **AAAI 2018.** 

### **Emotion Interaction Patterns**

Like→Like (empathy)

Sadness **→**Sadness **(empathy)** 

Sadness → Like (comfort)

Disgust → Disgust (empathy)

Disgust → Like (comfort)

Anger → Disgust

Happiness→Like

# Interactiveness: Behaving More Proactively by Asking Good Questions

我昨天晚上去聚餐了 I went to dinner yesterday night.

Yansen Wang, Chenyi Liu, Minlie Huang, Liqiang Nie. Learning to ask questions in open-domain conversation systems. **ACL 2018**.

Asking good questions requires scene understanding

Scene: Dining at a restaurant

我昨天晚上去聚餐了 I went to dinner yesterday night.

Friends? Place? Food? ... Persons? Bill?
WHO WHERE HOW-ABOUT HOW-MANY WHO

Yansen Wang, Chenyi Liu, Minlie Huang, Liqiang Nie. Learning to ask questions in open-domain conversation systems. **ACL 2018**.

- Responding + asking (Li et al., 2016)
- Key proactive behaviors (Yu et al., 2016)
- Asking good questions are indication of machine understanding
- Key differences to **traditional** question generation (eg., reading comprehension):
  - ◆ **Different goals**: Information seeking vs. Enhancing interactiveness and persistence of human-machine interactions
  - ◆ **Various patterns**: YES-NO, WH-, HOW-ABOUT, etc.
  - ◆ **Topic transition**: from topics in post to topics in response

- A good question is a natural composition of
  - ◆ Interrogatives for using various questioning patterns
  - ◆ **Topic words** for addressing interesting yet novel topics
  - ◆ Ordinary words for playing grammar or syntactic roles

Example 1:

User: I am too fat ...

Machine: How about climbing this weekend?

Example 2:

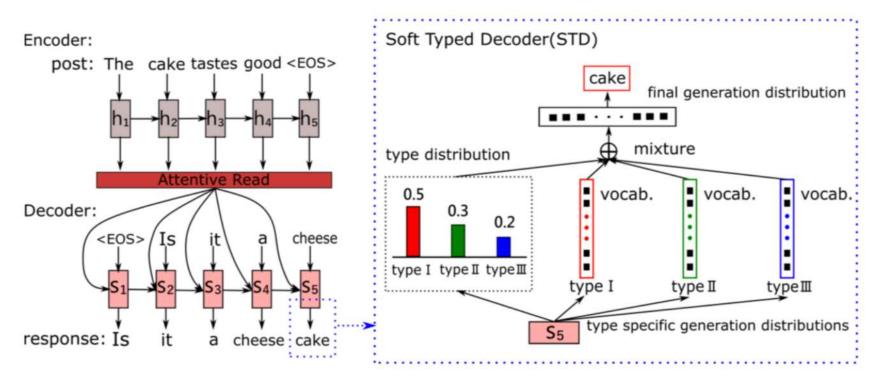

User: Last night, I stayed in <u>KTV</u> with friends. Machine: **Are** you happy with your <u>singing</u>?

### **Asking Good Questions**

### Typed decoders: soft typed decoder

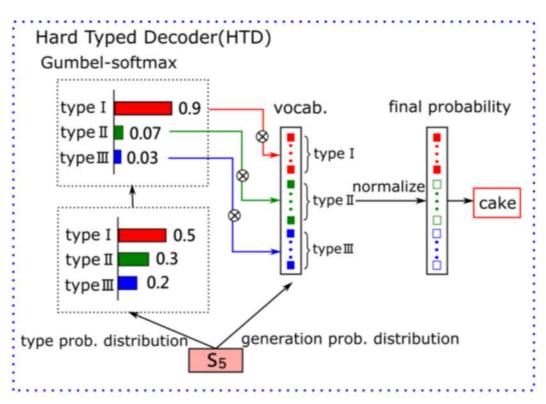

Yansen Wang, Chenyi Liu, Minlie Huang, Liqiang Nie. Learning to ask questions in open-domain conversation systems. **ACL 2018**.

### **Asking Good Questions**

### • Typed decoders: hard typed decoder

### For each post:

- A set of interrogatives
- A list of topic words
- Others for ordinary words

### **Topic words:**

- Training -- nouns, verbs
- Test predicted by PMI

Yansen Wang, Chenyi Liu, Minlie Huang, Liqiang Nie.

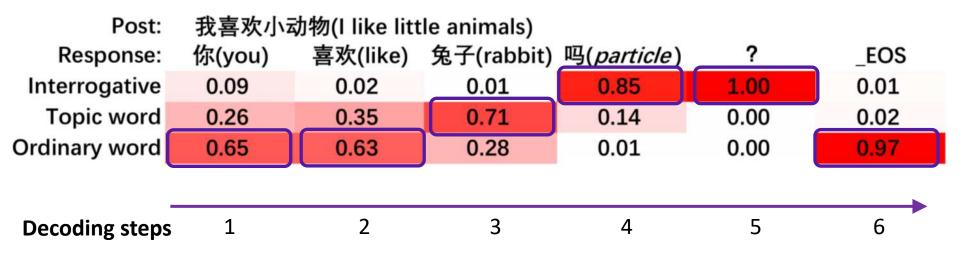

Learning to ask questions in open-domain conversation systems. ACL 2018.

### **Asking Good Questions**

Type prediction at each decoding position

### **Datasets**

- Dataset: 490,000 post-response pairs collected
   from Weibo; 5,000 for test, 5000 for validation
  - ◆ All responses are of questioning form
- 66,547 different words, and 18,717 words appear
   more than 10 times

# **Baselines**

- Seq2Seq: A simple encoder-decoder model (Luong et al., 2015)
- **Mechanism-Aware (MA):** Multiple responding mechanisms represented by real-valued vectors (Zhou et al., 2017)
- **Topic-Aware (TA):** Topic Aware Model by incorporating topic words (Xing et al., 2017)
- Elastic Responding Machine (ERM): Enhanced MA using reinforcement learning (Zhou et al., 2018)

# **Results**

Model	Perplexity	Distinct-1	Distinct-2	TRR
Seq2Seq	63.71	0.0573	0.0836	6.6%
MA	54.26	0.0576	0.0644	4.5%
TA	58.89	0.1292	0.1781	8.7%
ERM	67.62	0.0355	0.0710	4.5%
STD	56.77	0.1325	0.2509	12.1%
HTD	56.10	0.1875	0.3576	43.6%

Table 1: Results of automatic evaluation.

# **Results**

### Manual evaluation: Appropriateness, richness, willingness

Models	A	ppropriatenes	SS		Richness	ii .	8	Willingness	
Models	Win (%)	Lose (%)	Tie (%)	Win (%)	Lose (%)	Tie (%)	Win (%)	Lose (%)	Tie (%)
STD vs. Seq2Seq	42.0	38.6	19.4	37.2**	15.2	47.6	45.4*	38.6	16.0
STD vs. MA	39.6*	31.2	29.2	32.6**	16.8	50.6	49.4**	27.0	23.6
STD vs. TA	42.2	40.0	17.8	49.0**	5.4	45.6	47.6*	40.2	12.2
STD vs. ERM	43.4*	34.4	22.2	60.6**	13.2	26.2	43.2*	36.8	20.0
HTD vs. Seq2Seq	50.6**	30.6	18.8	46.0**	10.2	43.8	58.4**	33.2	8.4

HTD vs. ERM	64.8**	23.2	12.0	72.2**	8.4	19.4	56.6**	36.6	6.8
HTD vs. STD	52.0**	33.0	15.0	38.0**	26.2	35.8	61.8**	30.6	7.6

Yansen Wang, Chenyi Liu, Minlie Huang, Liqiang Nie. Learning to ask questions in open-domain conversation systems. **ACL 2018**.

# **Examples**

Post: 我们昨天去唱歌了

We went to karaoke yesterday.

Seq2Seq: 什么时候?

When?

MA: 你怎么知道我是在问

**How** did you know I am questioning you?

TA: 什么?

What?

ERM: 什么情况?

What happened?

STD: 去哪里唱歌?

Where did you sing karaoke?

HTD: 你们几个人唱歌?

**How many** people were <u>singing</u> with you?

Yansen Wang, Chenyi Liu, Minlie Huang, Liqiang Nie. Learning to ask questions in open-domain conversation systems. **ACL 2018**.

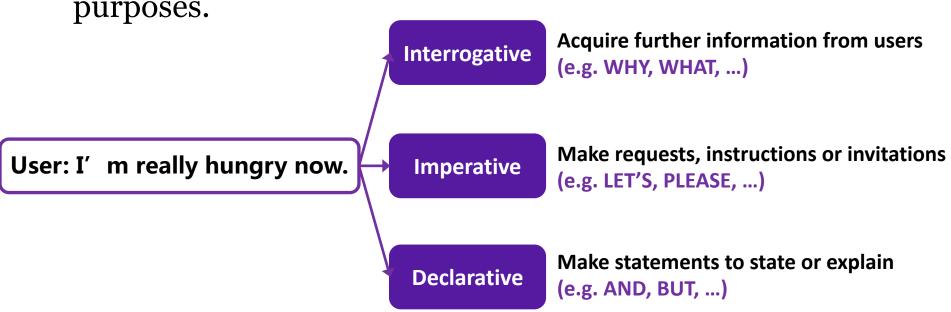

# Interactiveness: Achieving Different Speaking Purposes by

**Controlling Sentence Function** 

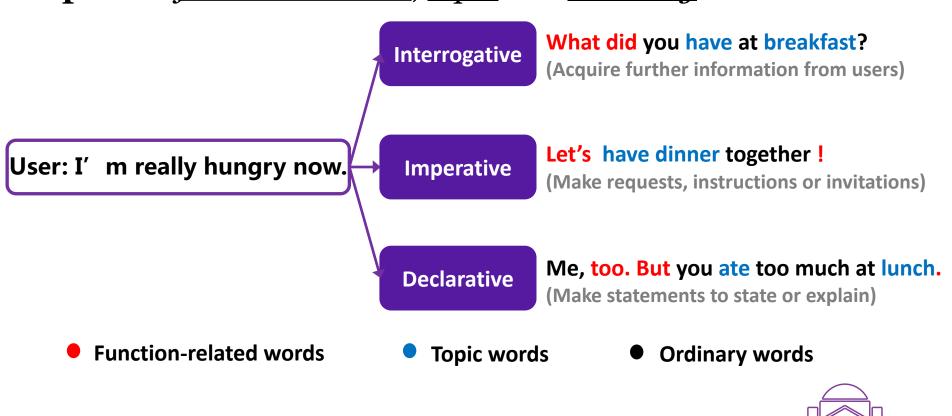

Sentence function indicates different conversational

Response with controlled sentence function requires a global
 plan of <u>function-related</u>, <u>topic</u> and <u>ordinary</u> words.

- Key differences to other controllable text generation tasks:
  - ◆ Global Control: adjust the global structure of the entire text, including changing word order and word patterns
  - Compatibility: controllable sentence function + informative content

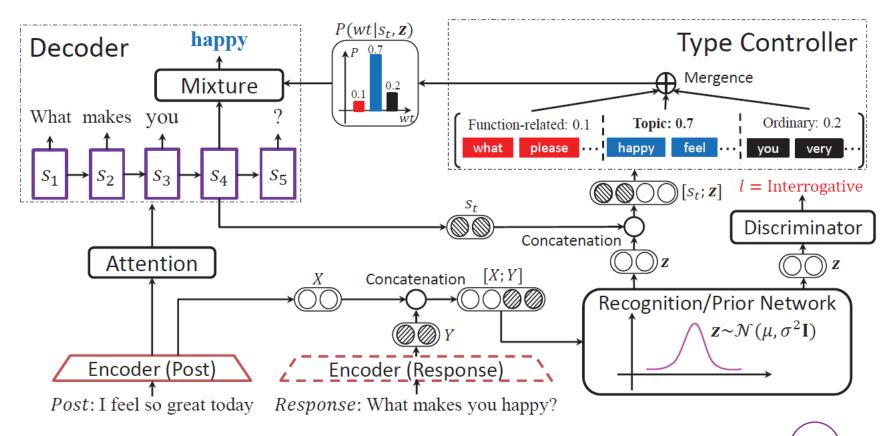

### Solutions:

- ◆ Continuous Latent Variable: project different sentence functions into different regions in a latent space + capture word patterns within a sentence function
- ◆ **Type Controller**: arrange different types of words at proper decoding positions by estimating a distribution over three word types

Conditional Variational Autoencoder (CVAE) Framework

 Dataset: post-response pairs with sentence function labels

	#Post	1,963,3	82
Training		Interrogative	618,340
Training	#Response	Declarative	672,346
		Imperative	672,696
	#Post	24,03	4
Validation		Interrogative	7,045
varidation	#Response	Declarative	9,685
		Imperative	7,304
Test	#Post	6,000	)

Automatic Evaluation: Perplexity, Distinct-1/2,

### Accuracy

Model	PPL	Dist-1	Dist-2	ACC
c-seq2seq	57.14	949/.007	5177/.041	0.973
MA	46.08	745/.005	2952/.027	0.481
<b>KgCVAE</b>	56.81	1531/ <b>.009</b>	10683/.070	0.985
Our Model	55.85	<b>1833</b> /.008	15586/.075	0.992

Table 3: Automatic evaluation with perplexity (PPL), distinct-1 (Dist-1), distinct-2 (Dist-2), and accuracy (ACC). The integers in the Dist-\* cells denote the total number of distinct *n*-grams.

### Manual Evaluation: Grammaticality, Appropriateness,

### Informativeness

Model	I	Interrogative			Declarative			Imperative		
WIOGCI	Gram.	Appr.	Info.	Gram.	Appr.	Info.	Gram.	Appr.	Info.	
Ours vs. c-seq2seq	0.534	0.536	0.896*	0.630*	0.573*	0.764*	0.685*	0.504	0.893*	
Ours vs. MA	0.802*	0.602*	0.675*	0.751*	0.592*	0.617*	0.929*	0.568*	0.577*	
Ours vs. KgCVAE	0.510	0.626*	0.770*	0.546*	0.515*	0.744*	0.780*	0.521*	0.837*	

Table 4: Manual evaluation results for different functions. The scores indicate the percentages that our model wins the baselines after removing tie pairs. The scores of our model marked with \* are significantly better than the competitors (Sign Test, p-value < 0.05).

### Words and Patterns in Function Control

Function	Frequen	requent Words Fre		quent Patterns	Respons	e Examples
	Chinese	English	Chinese	English	Chinese	English
Interrogative	?	?	x是说y吗?	Does x mean y?	你 <u>是说</u> 我帅吗?	<u>Do</u> you <u>mean</u> I'm handsome?
	是吗	be	x是在y吗?	Is x y?	你是在夸我吗?	Are you praising me?
	说	particle mean	x在哪y啊?	Where does $x$ $y$ ?	你在哪上班啊?	Where do you work?
	什么	what	x想y什么z?	What $z$ does $x$ want to $y$ ?	你 <u>想</u> 要 <u>什么</u> 类型的?_	What type do you want to choose?
Imperative	! 要	! will	那就y吧	Do y, then.	<u>那就</u> 好好养着 <u>吧</u>	Take care of yourself, then.
	可以来请	can come please	x要把y给z	Let $x$ give $y$ to $z$ .	我 <u>要把</u> 你的房子 <u>给</u> 你	Let me give your house to you.
Declarative	是也	be also/too	x也是y,可是z	x also $y$ , but $z$	我 <u>也是</u> 这么想的, <u>可是</u> 我要找 一个人,哈哈	I <u>also</u> think so, <u>but</u> I will find a person. Ha-ha.
	觉得 可是	think but	x也是, a都b	x, too, and $a$ has $b$ .	我也是,我的粉丝都被我震精	Me, too, and my fans have been
	没	no			了	shocked by me.

Figure 3: Frequent function-related words and frequent patterns containing at least 3 function-related words. The letters denote the variables which replace ordinary and topic words in the generated responses. The underlined words in responses are those occurring in patterns.

### Case Study

Post:	如果有一天我突然跟你绝交,你会怎样? What would you do if I suddenly broke up with you someday?
Target Function:	Interrogative
KgCVAE:	你是不是想我了 Did you miss me?
Our Model:	你说的是我的错吗? Do you mean that it's my <u>fault</u> ?
Target Function:	Imperative
KgCVAE:	我会告诉你的! I will tell you!
Our Model:	我会把你的 <u>礼物</u> 给你的,放心 Rest assured that I would give your gift to you.
Target Function:	Declarative
KgCVAE:	我也觉得我是个好男人。 I think I'm a good man, too.
Our Model:	我 <b>觉得</b> 我会很 <u>傻</u> ,我会被我妈 <u>骂</u> 的 I would think that I was <u>stupid</u> and I would be <u>blamed</u> by my mother.

Post:	如果有一天我突然跟你绝交,你会怎样? What would you do if I suddenly broke up with you someday?
Interrogative	你说的是我的错吗?
Response #1	Do you mean that it's my fault?
Interrogative	你会不会 <u>说话</u> ?
Response #2	Can you <u>speak</u> normally?
Interrogative Response #3	你想我 <b>怎样</b> ?我要不要 <u>绝交</u> ? What do you think I should do? Shall I break up with you?

- Function-related words
- Topic words
- Ordinary words

# Consistency: Behaving More Consistently with Personality

# **Personality of Conversational Systems**

Personality is important for game, custom service, etc.

### General seq2seq model

User: Are you a boy or a girl?

Chatbot: I am a boy.

User: Are you a girl?

Chatbot: Yes, I am a girl.

User: 你几岁了?

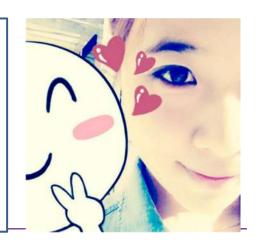

小冰: 我啊。。。反正是九零后!

User: 那你是几几年出生的? 小冰: 错,75年阳历一月出生。

User: 你是九零后,怎么会75年出生?

小冰: 生在九零后, 在深圳只能被当做八

零后了。

# **Personality of Conversational Systems**

- Passing the Turning Test?
  - Deep semantic understanding
  - Existing chatting machine lacks identity or personality
- Personality is a well-defined concept in psychology(Norman, 1963;
   Gosling et al., 2003)
- Extremely subtle, implicit in language expression:
  - ◆ Age, gender, language, speaking style, level of knowledge, areas of expertise
- Existing works
  - ◆ Implicit personalization: learn implicit conversation style (Li et al., 2016; Al-Rfou et al., 2016)
  - ◆ Require dialogue data from different users with **user attributes tagged**

### 清華大学 Tsinghua University

# **Personality of Conversational Systems**

• Deliver coherent conversations w.r.t. **identity/personality** 

### **Generic Dialogue Data for Training**

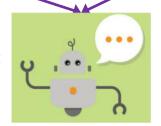

UserA: how old are you?

UserB: I am six.

UserA: do you like to play piano?

UserB: I play violin.

Personality-coherent Chatbot

### **Pre-specified Chatbot Profile**

Profile key	Profile value
Name	汪仔(Wang Zai)
Age	三岁(3)
Gender	男孩(Boy)
Hobbies	动漫(Cartoon)
Speciality	钢琴(Piano)

### **Generated Dialogues**

User: how old are you?

Machine: I am three years old.

User: do you like to play piano?

Machine: Yes, I play piano.

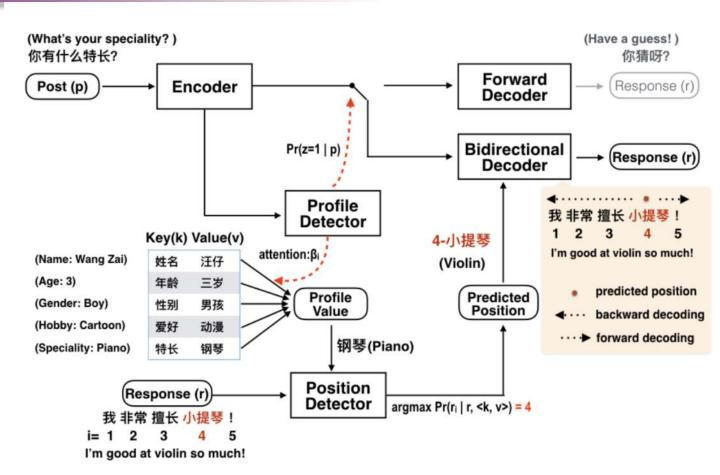

# **Personality of Conversational Systems**

**Encoder** 

Profile detector

Position detector

Decoder

•Qiao Qian, Minlie Huang, Haizhou Zhao, Jingfang Xu, Xiaoyan Zhu. Assigning personality/identity to a chatting machine for coherent conversation generation. **IJCAI-ECAI 2018**.

### **Datasets**

- WD: 9,697,651 post-response pairs from Weibo
- 76,930 pairs from WD for 6 profile keys (name, gender, age, city, weight, constellation) with about 200 regular expression patterns, each annotated to positive or negative
- 42,193 positive pairs, each mapped to one of the keys
- Manual Dataset: real, human-written conversational posts

# **Results**

### Post-level evaluation

Method	Nat.	Logic	Cor.
Seq2Seq	71.8%	56.0%	23.8%
Seq2Seq +PV	72.0%	56.0%	41.3%
Seq2Seq +PVD	73.3%	52.5%	38.0%
Our Model -PD	82.7%	51.7%	38.3%
Our Model	83.3%	59.5%	45.8%

### **Session-level evaluation**

Method	Consistency	Variety	
Seq2Seq	1.3%	1.0%	
Seq2Seq +PV	47.0%	1.3%	
Seq2Seq +PVD	40.0%	7.5%	
Our Model -PD	38.8%	16.0%	
Our Model	49.5%	27.8%	

# Generated sample responses that exhibit session-level consistency

Chinese	English(Translated)
U:你对什么事感兴趣	U:What are you interested in?
S:打篮球	S:Playing basketball.
U:你都有啥爱好呀	U:What's your hobby?
S:篮球	S:Basketball.
U:告诉我你兴趣所在	U:Tell me your interest.
S:我喜欢篮球	S:I like to play basketball.
U:你还没说你几岁呢	U:You haven't told me your age.
S:我三岁了	S:I'm three years old.
U:你今年有15了不	U:Are you 15 years old or not?
S:我还没到呢	S:I'm not yet.
U:你多大啦	U:How old are you?
S:3岁了	S:Three years old.

•Qiao Qian, Minlie Huang, Haizhou Zhao, Jingfang Xu, Xiaoyan Zhu. Assigning personality/identity to a chatting machine for coherent conversation generation. **IJCAI-ECAI 2018**.

# **Semantics:**

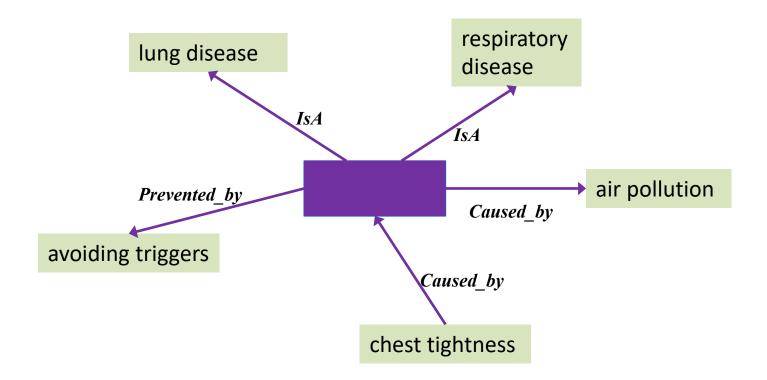

# Better Understanding and Generation with

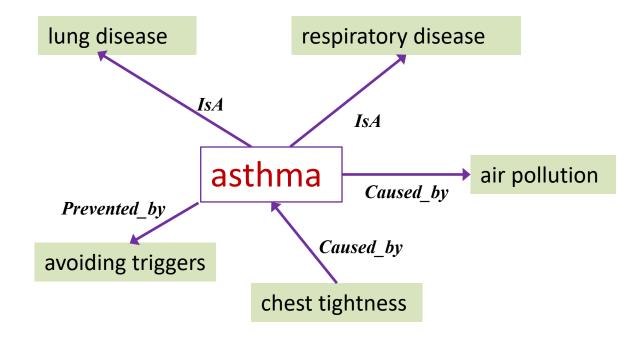

- Commonsense knowledge consists of facts about the everyday world, that all humans are expected to know. (Wikipedia)
  - Lemons are sour
  - Tree has leafs
  - Dog has four legs
- Commonsense Reasoning ~ Winograd Schema Challenge:
  - The trophy would not fit in the brown suitcase because it was too big. What was too big?
  - The trophy would not fit in the brown suitcase because it was too **small**. What was too **small**?

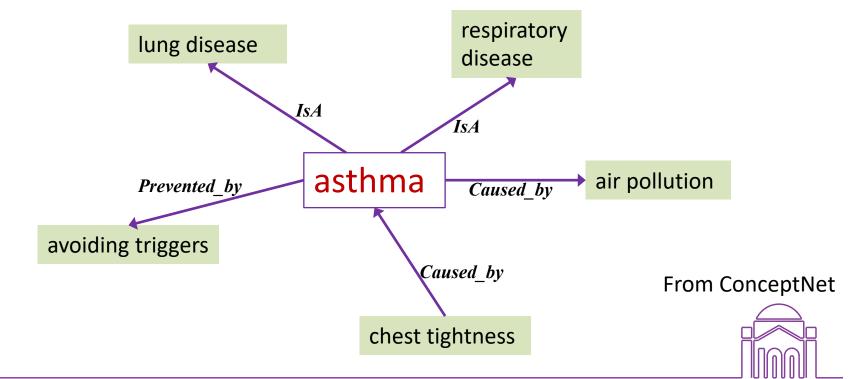

Post: I have an asthma since three years old.

Triples in knowledge graph:
(lung disease, IsA, asthma)
(asthma, Prevented\_by, avoiding triggers)

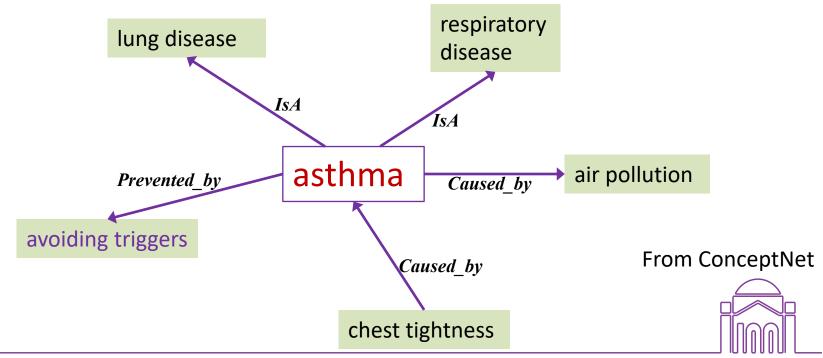

Post: I have an asthma since three years old.

```
Triples in knowledge graph:
(lung disease, IsA, asthma)
(asthma, Prevented_by, avoiding triggers)
```

Response: I am sorry to hear that. Maybe avoiding triggers can prevent asthma attacks.

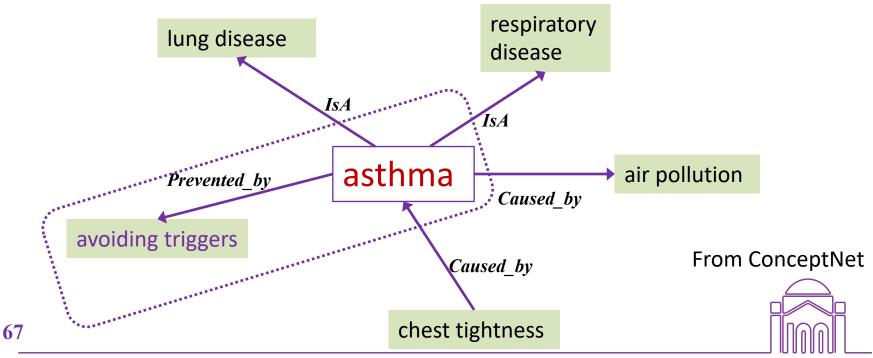

66

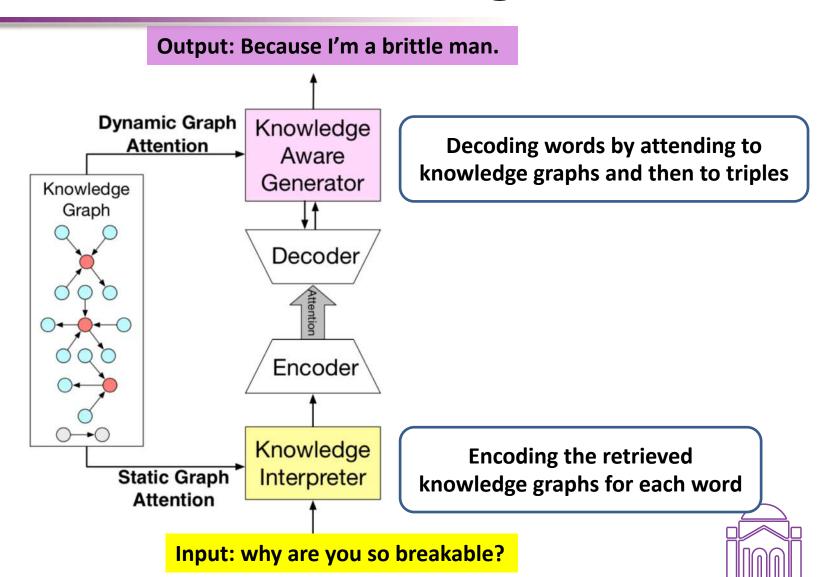

Post: I have an asthma since three years old.

```
Triples in knowledge graph:
(lung disease, IsA, asthma)
(asthma, Prevented_by, avoiding triggers)
```

Response: I am sorry to hear that. Maybe avoiding triggers can prevent asthma attacks.

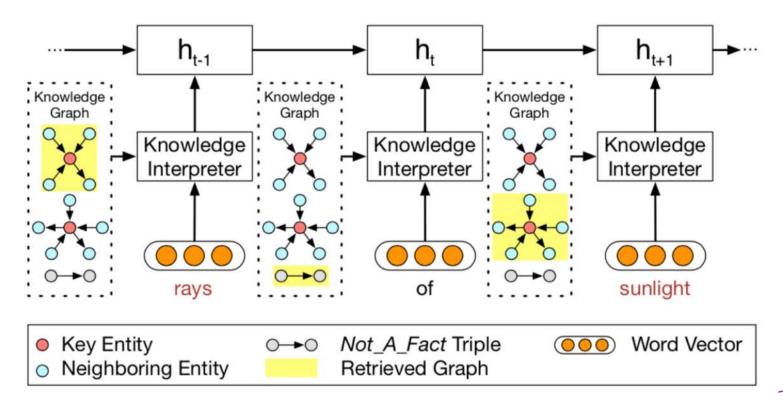

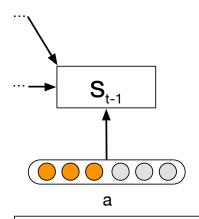

**Static graph attention**: encoding semantics in graph, Feeding knowledge-enhanced info. into the encoder

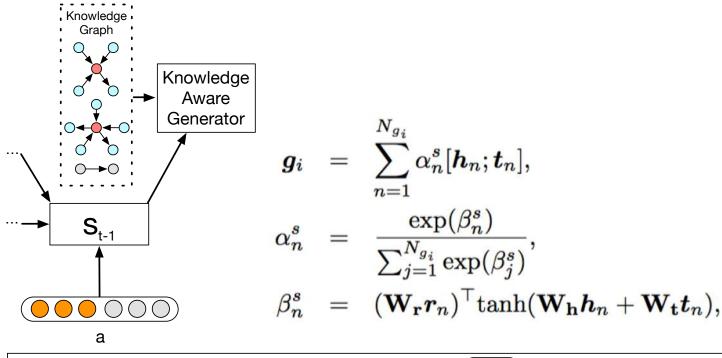

$$egin{array}{lll} oldsymbol{s}_{t+1} &=& \mathbf{GRU}(oldsymbol{s}_t, [oldsymbol{c}_t; oldsymbol{c}_t^g; oldsymbol{c}_t^k; oldsymbol{e}(y_t)]), \ oldsymbol{e}(y_t) &=& [oldsymbol{w}(y_t); oldsymbol{k}_j], \end{array}$$

Hao Zhou, Tom Yang, Minlie Huang, Haizhou Zhao, Jingfang Xu, Xiaoyan Zhu. Commonsense Knowledge Aware Conversation Generation with Graph Attention. **IJCAI-ECAI 2018**, Stockholm, Sweden.

## **Generation Examples 1**

<u>Post</u>: He proposed <u>March 5th. We will be married October 10th.</u> <u>So 7 months</u>

**Knowledge**: (engaged, RelatedTo, married), (wedding, RelatedTo, married), (miss, DistinctFrom, married), (March, RelatedTo, months)

- Seq2Seq: I'm not sure how to answer that. I'm not sure how to make a date.
- MemNet: I'm assuming he's married to a gay marriage?
- CopyNet: I'm sorry, I'm not sure what you mean by that.
- **CCM**: I'm pretty sure he's going to be **engaged** in the next 6 **months**.

## **Generation Examples 2**

Post: Totally thought it was going to be doug's grave.

**Knowledge**: (thought, RelatedTo, thinking), (doug, HasProperty,

dead), (dead, RelatedTo, grave), (grave, RelatedTo, death)

- Seq2Seq: I was thinking the same thing.
- MemNet: I thought it was a dead end.
- CopyNet: I think it's a bit of a stretch.
- **CCM**: I thought it was doug's **death**. I was **thinking** the same thing.

**Find context clues:** plan the order of events and entities.

Today is **Halloween**.

Jack is so excited to go trick or treating tonight.

He is going to dress up like a monster.

The costume is real scary.

He hopes to get a lot of candy.

Story Ending Generation with Incremental Encoding and Commonsense Knowledge AAAI 2019

#### Commonsense knowledge

Today is **Halloween**.

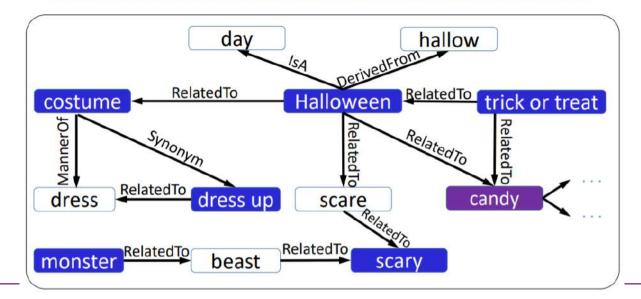

Jack is so excited to go **trick or treating** tonight.

He is going to dress up like a monster.

The **costume** is real **scary**.

He hopes to get a lot of candy.

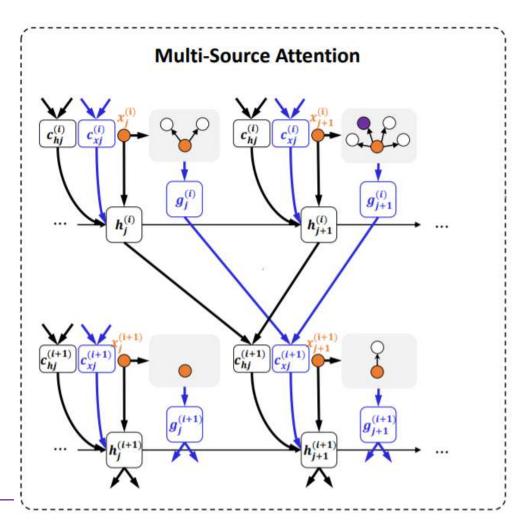

#### **Incremental Encoding**

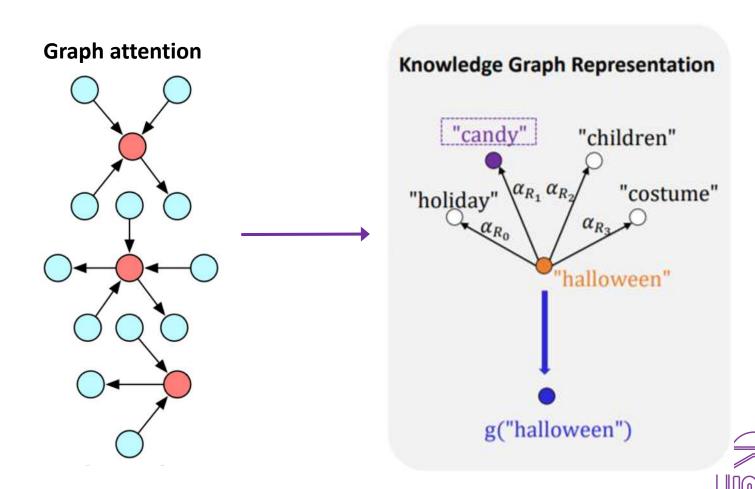

## **Incremental Encoding** Today is Halloween. Jack is so excited to go trick or treating tonight. $X_3$ He is going to dress up like a monster. The costume is real scary. He hopes to get a lot of candy.

#### **Multi-Source Attention**

**Attention to the knowledge base:** static graph attention

## **Experiment**

#### ROCStories, 90,000 for training, 8912 for test

Model	PPL	BLEU-1	BLEU-2	Gram.	Logic.
Seq2Seq	18.97	0.1864	0.0090	1.74	0.70
HLSTM	17.26	0.2459	0.0242	1.57	0.84
HLSTM+Copy	19.93	0.2469	0.0248	1.66	0.90
HLSTM+MSA(GA)	15.75	0.2588	0.0253	1.70	1.06
HLSTM+MSA(CA)	12.53	0.2514	0.0271	1.72	1.02
IE (ours)	11.04	0.2514	0.0263	1.84	1.10
IE+MSA(GA) (ours)	9.72	0.2566	0.0284	1.68	1.26
IE+MSA(CA) (ours)	8.79	0.2682	0.0327	1.66	1.24

Table 1: Automatic and manual evaluation results.

#### Story 1:

#### **Context:**

Taj has never drank an espresso drink.

He ordered one while out with his friends.

The shot of espresso tasted terrible to him.

Taj found that he couldn't stop talking or moving.

#### **Generated Ending:**

He decided to never drink again.

#### Story 2:

#### **Context:**

Martha is cooking a special meal for her family.

She wants everything to be just right for when they eat.

Martha perfects everything and puts her dinner into the oven.

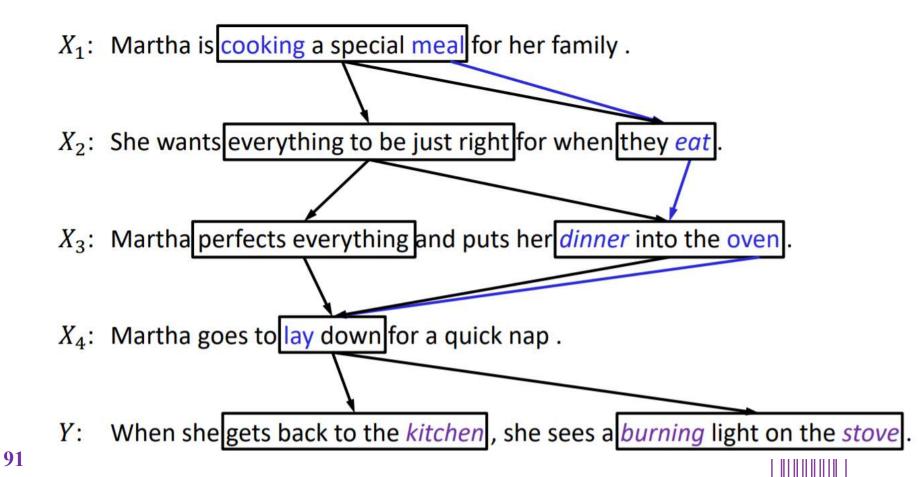

Martha goes to lay down for a quick nap.

#### **Generated Ending:**

When she gets back to the kitchen, she sees a burning light on the stove.

#### **Building context clues incrementally**

## Summary

- Semantics, consistency, interactiveness
- Emotion, personality, and knowledge
- Still a long way to go: existing conversational systems are still far from human-like

#### **Future Research Problems**

 Multi-modality emotion perception and expression (voice, vision, text)

- Personality, identity, style → "human-like robot"
  - Introvert or extrovert
  - Personalized (style, or profile)

- Learning to learn (lifelong learning)
  - Grow up from interactions with human partners and environment
